Problem Solution Fit

The Retailer	High maintenance cost, possiblity of network issue, need keen survaillance.	The novelty is to produce the Chatbot to ask questions regarding the details of the stock availability.
Need to find the expiry date and sell the products before it. Maintain the product cash flow without fault.	The main reasons identified for the accumulation of inventory are forecasting error, bulk purchase, data entry error, quality-related issues, product category not traceable and wrong material being procured.	Calculate usage and benefits. Need employee who knows well about the system and to handle it
Seeing their neighbour shop installing this and their advanced features which makes the work easier. Felt really worse for getting waste of the products via expiring and having no enough knowledge about the product's sale. Before : Felt stess and anxiety After : Feeling relaxed, happy and peaceful.	Maintaining the product stocks and cash flow of the product. Trigger the retailer via an email when the product stock reaches the minimum number. It will also sends the transaction details and also wil maintain the totalshop's product purchase rate.	There will be a retailer in the shop to monitor the products.
